Face Lift / Neck Lift Compression Garments

Why should I use a medical compression garment?

It is essential that the compression garment worn during the recovery period provides targeted compression, to reduce swelling and to help shape the chin and form a pleasing contour.

Compression garments need important features like flat, non-marking seams, inner panels that provide the targeted compression necessary during healing, and no labels or anything that will irritate your skin during extended wear.

The hospital provides you with 2 chin compression garments and you will wake up wearing one after surgery. For any procedure involving liposuction to your chin, I would

recommend that you wear this day and night for 2 weeks following your surgery. You can remove it to wash your face/hair or for short periods during the day.

I hope you find this information useful. If you have any questions or require a little more information then please do not hesitate to [contact me](#).
